Assessment of AI-Generated Multimedia Content: University of Baltistan, Skardu

Oct 16, 2026 · @FAKHAAR AHMED

This assessment reviews the AI-generated admission campaign visuals and video made for the University of Baltistan, Skardu, and lists what to fix before anything is published. Admission dates, fees, facilities, logos and contact details must come from the university, not from AI tools.

Scope and Scorecard

What was reviewed: three visuals and one video.

- Infographic: 'Your Admission Journey, Four Steps Towards Your Future'
- Poster 1: 'Build Your Future, Learn Today. Prepare for Tomorrow.'
- Poster 2: 'More Than a Classroom, Discover Your University Experience'
- A 20-second vertical promotional video, assessed against its production brief. The final video file should be checked frame by frame before publishing.

How each item was judged: visual appeal, creativity, relevance to admissions, accuracy of text and facts, and readiness to publish.

Item	Main strengths	Main problems	Ready to publish?
Admission Journey infographic	Clear four-step idea, easy to scan, calm colours	Spelling errors, wrong step numbers, garbled tagline, unrelated icons	No, rebuild the text
'Build Your Future' poster	Strong layout, campus and mountain setting, logo placeholder	Unverified claims, invented hoodie text and slogans	Not yet, fact-check first
'More Than a Classroom' poster	Realistic campus view, clean four-block layout, clear call to action	Claims about labs and societies, an AI-made emblem	Not yet, fact-check first
20-second video	Short, vertical, suits Reels	Text, name and visuals must be verified	Check the final file

1. Image and Infographic Assessment

The three visuals share a strong look: navy and gold colours, real-looking campus and mountain scenery, and simple headlines. Each one still needs text and fact fixes before it can be posted.

Infographic: Your Admission Journey

Visual appeal: the navy and gold palette, four numbered cards and mountain background look professional and are easy to scan.

Creativity and relevance: a four-step journey (explore programmes, check eligibility, submit application, follow updates) is a useful idea and directly supports admissions.

Problems found:

- Many words are misspelled or garbled by the AI tool, for example in the card descriptions and in the line under the logo.
- The step numbers read 2, 2, 3 and 5 instead of 1, 2, 3 and 4.
- The header text has a glitchy outline and a stray square beside it.
- Some icons do not match their steps, such as a cup and notebook for 'Explore Programs'.

- The round green seal is an AI-made lookalike, not the official logo.
- The background building is blurry, which lowers text contrast.

Fixes: retype all text in an editor such as Canva or Photoshop, use numbers 1 to 4, add the official logo, and swap in simple icons (search, checklist, form, bell). Add a placeholder for the official admission link and do not show any dates until the university confirms them.

Poster 1: Build Your Future

Visual appeal: a clear headline in navy and gold, natural-looking students in front of the campus and mountains, and four easy benefit cards (Knowledge, Skills, Innovation, Opportunities).

Creativity and relevance: the four themes explain what a university offers in a quick, friendly way. The logo placeholder is the right choice.

Problems found:

- The hoodie reads 'University of Baltistan Skardu', which suggests official merchandise.
- The drone and technology image suggests research and technology facilities that are not verified.
- The signpost (Higher Studies, Research, Leadership, Global Perspective) and graduation gown imply specific pathways.
- Slogans such as 'Knowledge for a Brighter Tomorrow' and 'Empowering Young Minds' may not be official.
- Small text in the corners is hard to read on a phone.

Fixes: replace the placeholder with the official logo, remove or verify the drone and signpost claims, confirm which slogans the university actually uses, and delete the small corner texts.

Poster 2: More Than a Classroom

Visual appeal: a bright, realistic campus view, a clean four-block layout (Learn, Connect, Explore, Grow) and a clear closing banner, 'Your Journey Starts Here'.

Creativity and relevance: linking student life to the Skardu landscape is a strong and local idea.

Problems found:

- 'World-class academics, modern labs, and dedicated faculty' and 'join student societies' are claims that must be verified.

- The emblem at the top is an AI-made lookalike, not an official logo.
- 'Apply now' has no link or deadline, so readers do not know where to go.
- A word is broken awkwardly ('suppor-tive').
- The green bottom banner does not match the blue brand colours of the other designs.
- Some student photos look generic and may not reflect local students.

Fixes: rewrite claims in safe, general wording until facts are confirmed, use the official logo, add an [official website] placeholder, fix the word break, and match the banner colour to the rest of the campaign.

Issues common to all three visuals

- AI-made emblems and faces: use the official logo and consider a small 'concept visual' note if the university prefers it.
- Unverified claims about labs, research, societies and global opportunities.
- No verified admission details: add placeholders for dates, link and contact, to be filled by the university.

2. Video Assessment

The 20-second vertical video (9:16) is the right format for Instagram Reels and YouTube Shorts. This section judges it against its production brief, so the final file still needs a frame-by-frame check.

Engagement: four 5-second scenes (aerial campus, students walking, studying, scenic end screen) keep the pace fast enough to hold attention on social media.

Visual quality: the aim is photorealistic, natural light, slow camera movement and smooth cross-dissolves. AI footage often shows warped hands, odd faces or changing buildings, so each clip should be watched closely.

Message: the voiceover ('Your future begins with a dream... Your future starts here!') is clear and positive. It needs about 13 seconds to read, so it should be spread across scenes 2 to 4 and not squeezed into 5 seconds.

Pre-publishing checklist for the video:

- The university name reads 'University of Baltistan, Skardu' on the end screen, spelled correctly and large enough to read on a phone.
- Text is added in the editing app, not generated by the AI tool, so it is never garbled.

- No invented logo, emblem or building signs appear in any frame.
- Text stays inside the Instagram safe zone, away from the bottom 20% and the top 12% of the screen.
- The end screen keeps a blank area for verified dates, website and contact details.
- Music is licensed or royalty-free and quieter than the voiceover.
- The campus shown matches the real campus, and no facilities are shown that the university has not confirmed.

3. Overall Evaluation

The images, video and infographic work well together: posters attract attention, the video tells a quick story, and the infographic explains the admission steps. The design direction is strong, but none of the pieces should be published until the text errors and unverified claims are fixed.

Must-fix checklist before publishing

1. Retype every word in the infographic and correct the step numbers to 1, 2, 3 and 4.
2. Replace all AI-made emblems and placeholders with the official university logo.
3. Check each claim (labs, research, student societies, global opportunities, slogans) with the university, or rewrite it in safe, general wording.
4. Add verified admission dates, website link and contact details in the reserved spaces.
5. Fix small design issues: the word break, the mismatched green banner, and tiny corner text.
6. Watch the final video file closely for visual errors, spelling and the safe zone.
7. Get written approval from the university's admission or media office.

How to measure performance

Once the content is live, compare the pieces using views, shares, saves, link clicks and visits to the official admission page. Do not decide on looks alone: the real test is which piece sends the most prospective students to verified information.
