Recommended Multimedia Marketing Strategy: University of Baltistan, Skardu

Oct 16, 2026 · @FAKHAAR AHMED

This strategy combines AI-generated posters, a short promotional video and an admission infographic into one campaign that sends prospective students to the university's official website. Anything shown as a fact, such as dates, programmes or facilities, must be verified by the university first.

1. Objective, Audience and Content Roles

Objective: raise awareness of the University of Baltistan, Skardu among prospective students and send interested people to the university's official website for verified programme and admission information.

Assumed target audience (to be confirmed by the university):

- Students finishing intermediate (grade 12) or equivalent, in Skardu, Baltistan and the wider Gilgit-Baltistan region, and in other parts of Pakistan
- Parents and guardians who help decide on a university
- Teachers, school counsellors and community groups who guide students

Core message: 'Your future starts here', repeated on every piece so the campaign feels like one story.

Role of each content piece

Content piece	Role	Best channels	Call to action
'Build Your Future' poster	Grabs attention and sets an inspiring tone	Instagram and Facebook feed	Visit the official website
'More Than a Classroom' poster	Shows student life and local pride	Instagram, Facebook, WhatsApp status	Apply through the official link
'Your Admission Journey' infographic	Explains the steps in simple form	Carousel post, stories, website	Follow official announcements

Content piece	Role	Best channels	Call to action
20-second video	Reaches the most people and builds emotion	Instagram Reels, YouTube Shorts, Facebook Reels	Tap the link in bio

All four pieces must first be corrected using the Assessment document: fix the text errors, use the official logo, and remove unverified claims.

2. Channel Plan and 4-Week Schedule

The campaign uses each channel for what it does best, and every channel ends at the official website.

Channels

1. **Instagram and Facebook (posters):** publish the two posters as feed posts to grab attention and show the campus and student life.
2. **Instagram Reels, Facebook Reels and YouTube Shorts (video):** share the 20-second video to reach new viewers, with the official link in the bio or description.
3. **Informative posts (infographic):** post the admission journey as a single image or carousel, and pin it so applicants can find it easily.
4. **Official website:** treat it as the destination for every link. It should hold the verified programmes, dates, requirements and contact details.
5. **WhatsApp status and community groups:** share the poster and infographic through the university's official accounts and student groups.

4-week posting schedule

This schedule has no admission dates. The start date is for the university to choose, after approvals are complete.

1. **Week 1, Awareness:** post 'Build Your Future' and the video. Goal: reach and first impressions.
2. **Week 2, Student life:** post 'More Than a Classroom' and short stories or clips from real campus life, with permission from the students shown.
3. **Week 3, Information:** post the admission infographic and the official link. Goal: clicks and inquiries.
4. **Week 4, Reminder:** repost the best-performing piece and share the verified deadline and contact details if the university confirms them.

Posting tips

- Use the same colours, fonts and logo on every piece.
- Post when students are most active online, and check the platform's own analytics to find those times.
- Reply to comments and messages quickly, with answers the university has approved.

3. Performance Evaluation

The campaign should be judged on real numbers, not on how good the designs look. No targets are set here, because the university should set them after it sees its own starting figures.

What to measure

Measure	What it shows	Where to find it
Reach and views	How many people saw the content	Instagram, Facebook and YouTube analytics
Engagement (likes, comments, shares, saves)	How interested people were	Platform analytics
Link clicks	How many people wanted more information	Link-in-bio tool or tracked links
Admission-page visits	How many reached the official website	Website analytics
Inquiries	How many students asked questions by message, call or email	University inbox, phone log and DMs

How to compare the content

- Give each piece its own tracked link so clicks can be matched to the poster, infographic or video.
- Compare the pieces after the same number of days online, so older posts do not have an unfair advantage.
- Note which message gets the most saves and shares, because those usually show what people find useful.

How to decide what to repeat

1. Rank the pieces by link clicks and admission-page visits first, and engagement second.
2. Repeat or boost the best performers and rewrite the weakest ones.
3. Read the comments and inquiries to learn what students are confused about, and update the content to answer it.
4. Write a short results report at the end of the four weeks for the university's management.

4. Risks, Accuracy Rules and Conclusion

Main risks and how to reduce them

Risk	What can go wrong	How to reduce it
Wrong or garbled text	Spelling errors make the university look careless	Retype all text in an editor and proofread twice
Unverified claims	Posters promise labs, research or societies that may not exist	Check every claim with the university or use general wording
Fake or lookalike logos	AI-made emblems can look unofficial and cause trust problems	Use only the official logo supplied by the university
Wrong admission information	Students miss dates or apply wrongly	Show only verified dates, link and contact details
AI faces and scenes	Viewers may think they are real students	Consider a small 'concept visual' note, or use real photos with consent
Weak engagement	Content does not reach students	Test small, review the data weekly and adjust

Branding and accuracy rules

- One approved logo, one colour palette and one main slogan across all content.
- Every post links to the official website, and no admission details appear in the posts until the university confirms them.

- The university's admission or media office approves each piece in writing before it is published.

Conclusion

A mix of posters, a short video and an infographic is a suitable multimedia strategy because it pairs attention-grabbing visuals with clear, useful information. The campaign will work best if it uses accurate university information, consistent branding and real engagement data to decide what to repeat.
